

Protecting your privacy

At the reception of doctor's offices, pharmacies, hospitals, (semi) public institutions or hotels, private conversations often take place. Both visitors and receptionists talk to other people in person, and calls are often taken at the same or nearby desks. Waiting customers often sit near the reception desk and can thus listen in on conversations. For this specific problem in reception and waiting areas, Incatro has developed the PRIVACY screen, an acoustic separation screen that protects speech privacy and ensures speech intelligibility.

Custom-made

The PRIVACYscreens are custom-made according to your size and height requirements. As standard, the partitions are delivered with square corners. Rounded corners are available at an extra charge. The type of installation is adapted to the situation on location.

Personalised design

Our acoustic separation screen can be covered with any fabric. You have the choice between both smooth and textured fabrics, as well as between various colours. Would you prefer an PRIVACYscreen with a photo print? We would be happy to print a motif of your choice on our specially recycled cover fabric made from PET bottles. Since we work with sublimation printing processes, the colours are printed into the fabric fibre itself so that the reproduced image is razor sharp. You can choose from motifs from our image database, works by a specific artist, your own photo, or your own digital image file. In short, the design options are unlimited.

Sustainable solution

Incatro wants to contribute to a world with a better quality of life. That's why we respect the environment and place special emphasis on the sustainability of our acoustic panels. This way, we can guarantee the long-term quality and acoustic properties of our products. Our photo prints and single-colour fabrics are easily replaceable, which means you can enjoy your acoustic product for even longer. Since our products are free of harmful substances, they can be disposed of as normal waste. If you so desire, Incatro will also take back your product free of charge.

Since 2018, Incatro has been certified by the Dutch TÜV with the NEN-EN- ISO 14001:2015 certificate (International environmental management standard).

Technical specifications

- Acoustic performance : NRC 0,90 per side / Alpha W = 0,95
- Fire rating : filling A1, cover fabric B (B - s1 - d1)
- Weight : 15 kg/m²
- Edge trim : aluminium profile (90 mm thick) with a visible edge of 1.8 mm at the front.
The aluminium profile is available in the colours white RAL 9010 and 9016, anthracite-black RAL 7021 and aluminium-grey RAL 9006. The profile can also be covered with fabric on request.
- Corner version : the acoustic screen is delivered with square corners as standard. Rounded corners (R20) are available at an extra charge
- Design of the front Fabrics : broad selection of modern single-colour fabrics, both smooth and textured (fabric samples are available on request).
- Prints : very high-quality digital prints (sublimation printing)
- Installation : depending on the situation on location
